What is BioNLP

**Biomedical Natural Language Processing,
Biomedical Text Mining**

**Knowledge extraction from text in
biomedical/clinical field**

**Objective: Facilitate understanding and
decision making in computational way**

Subfield of bioinformatics

Common: sequence data

Difference: alphabet

Data

Data is generated by human

- Biomedical Literature

- Clinical Notes

- Textual Description in Knowledge Database

NLP Tasks

Basic Tasks:

- ❑ Tokenization (paragraph, sentence, words)
- ❑ POS Tagging (noun, verb, adj), Lemmatization, Stem
- ❑ Dependency Parsing

Advance Tasks:

- ❑ Name Entity Recognition (PubTator)
- ❑ Information Retrieval (PubMed)
- ❑ Document classification (Multi-class & Multi-label)
- ❑ Information Extraction

Protein-Protein-Interaction

Gene-Gene-Interaction

Drug-Drug-Interaction

Biological Event

- ❑ Question Answering

NER

- ➡ Online Tools
- ➡ API Calling
- ➡ Write your own code

Export Annotations

Export our annotated publications in batches of up to 100 in GET or 1000 in POST, in BioC, pubtator or JSON formats. To programmatically retrieve text-mined results in PubTator, one can use web queries as follows:

[https://www.ncbi.nlm.nih.gov/research/pubtator-api/publications/export/\[Format\]?\[Type\]=\[Identifiers\]&concepts=\[Bioconcepts\]](https://www.ncbi.nlm.nih.gov/research/pubtator-api/publications/export/[Format]?[Type]=[Identifiers]&concepts=[Bioconcepts])

Parameters

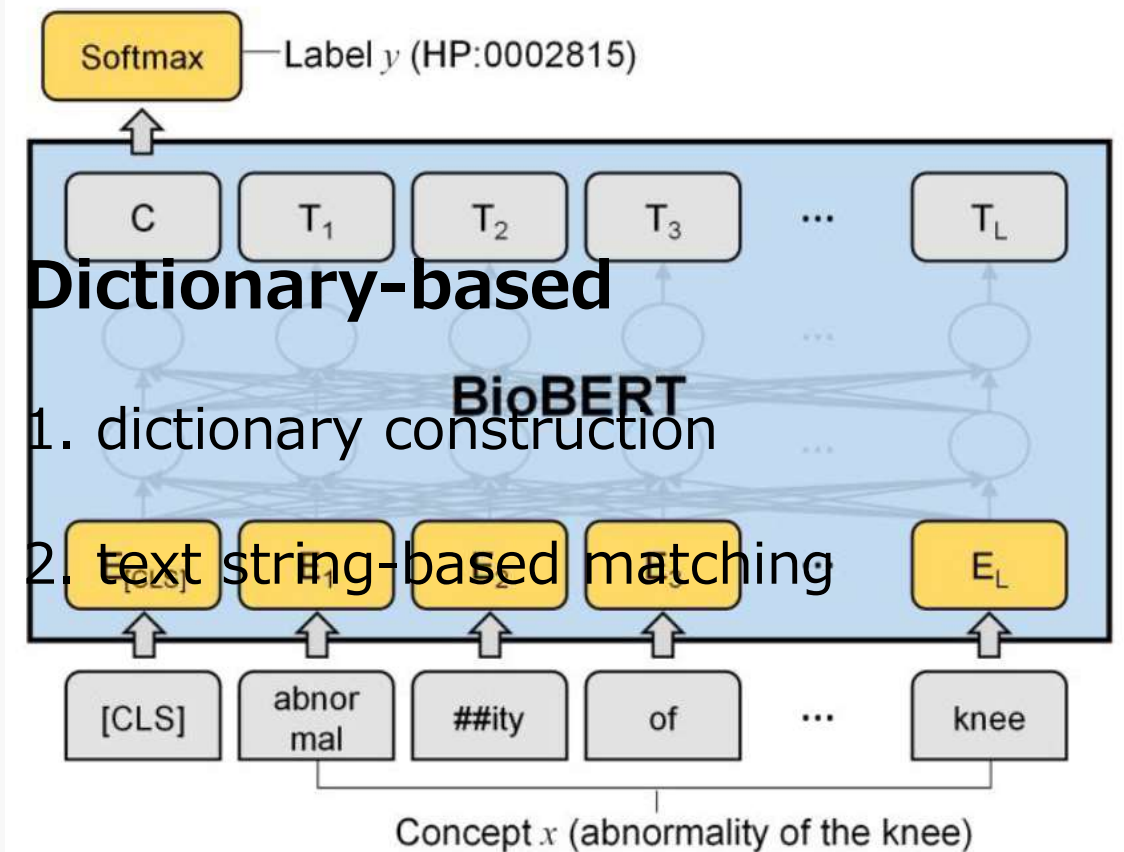

Parameter	Description
Format	pubtator (pubtator)
	biocxml (BioC-XML)
	biocjson (BioC-JSON)

NER Methods

Dictionary-based

ML-based

Deep Learning Model (PhenoTagger[1])

[1] Luo, L., **Yan, S.**, Lai, P. T., Veltri, D., Oler, A., Xirasagar, S., ... & Lu, Z. (2021). PhenoTagger: a hybrid method for phenotype concept recognition using human phenotype ontology. *Bioinformatics*, 37(13), 1884-1890.

Example of Document Classification

Cancer Hallmark Annotation[2]

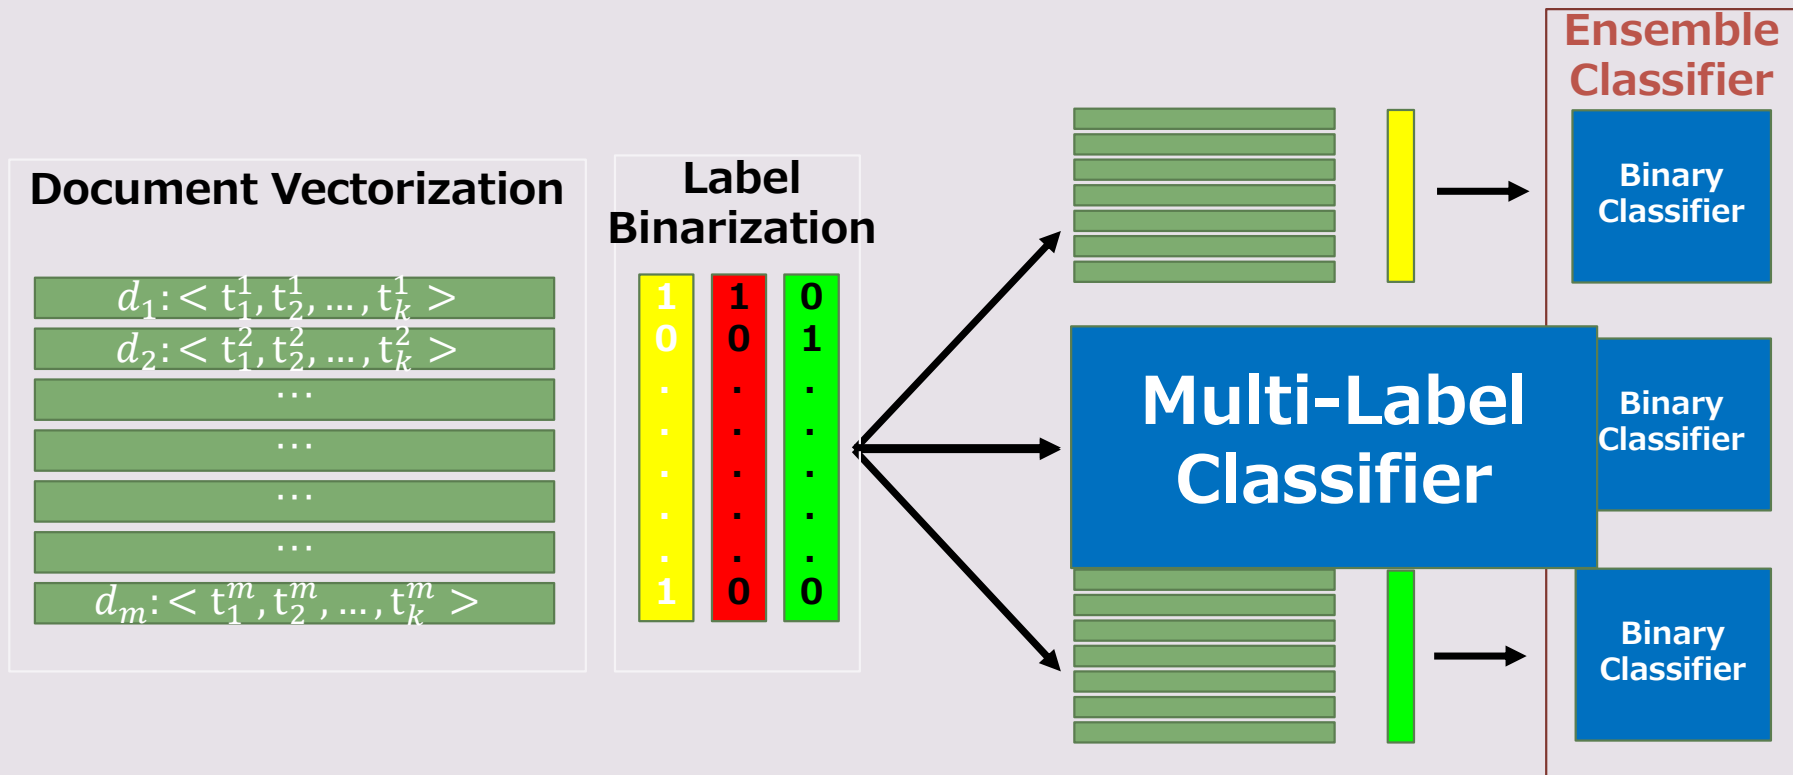

... *Genes that were overexpressed in OM3 included oncogenes, cell cycle regulators, and those involved in signal transduction, whereas genes for DNA repair enzymes and inhibitors of transformation and metastasis were suppressed.*  *In arsenic-treated cells, multiple DNA repair proteins were overexpressed.*  ... [3]

[2] **Yan, Shankai**, and Ka-Chun Wong. "Elucidating high-dimensional cancer hallmark annotation via enriched ontology." *Journal of biomedical informatics* 73 (2017): 84-94.

[3] Bae, Dong-Soon, et al. "Characterization of gene expression changes associated with MNNG, arsenic, or metal mixture treatment in human keratinocytes: application of cDNA microarray technology." *Environmental Health Perspectives* 110.suppl 6 (2002): 931-941.

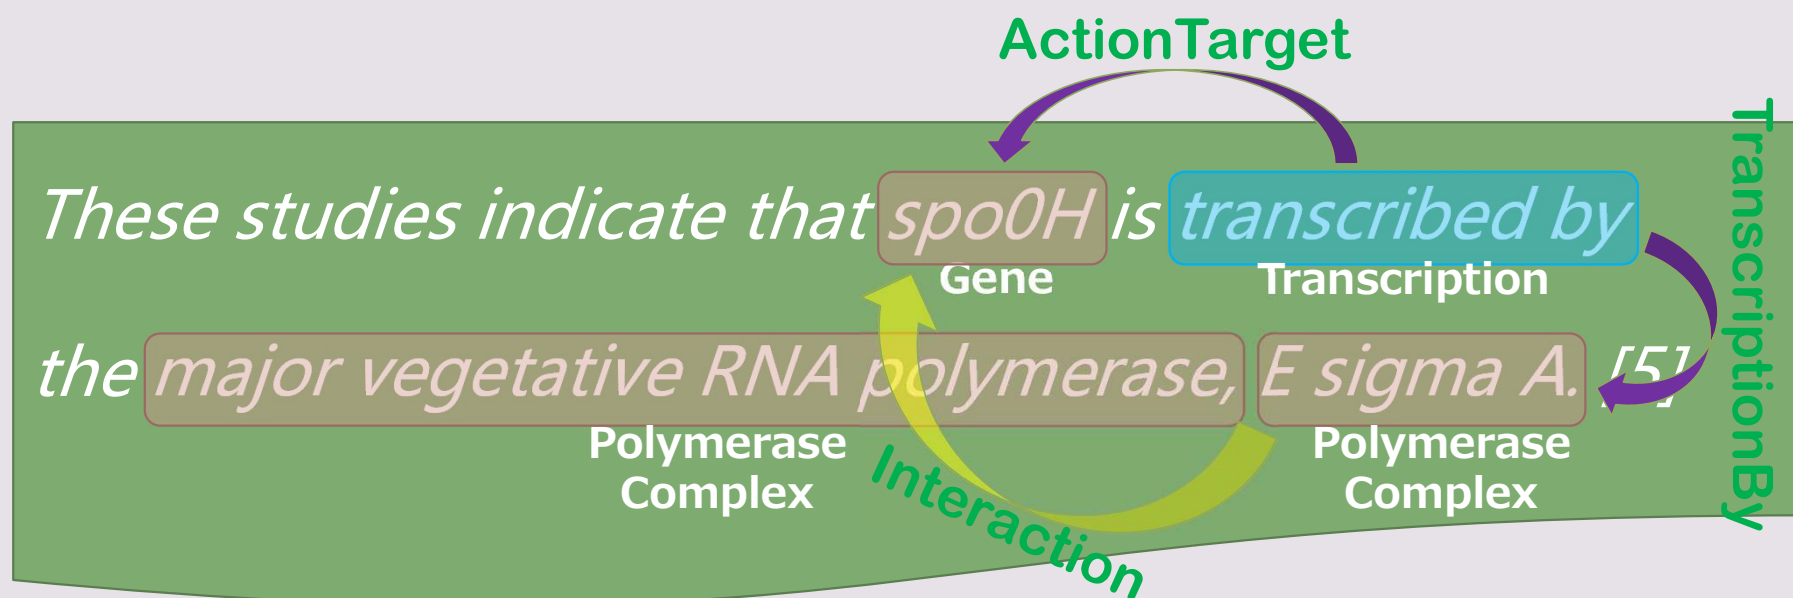

-  Activating invasion and metastasis (IM)
-  Genomic instability and mutation (GI)
-  Sustaining proliferative signaling (PS)
-  Evading growth suppressors (GS)

Multi-label Classification

Example of IE

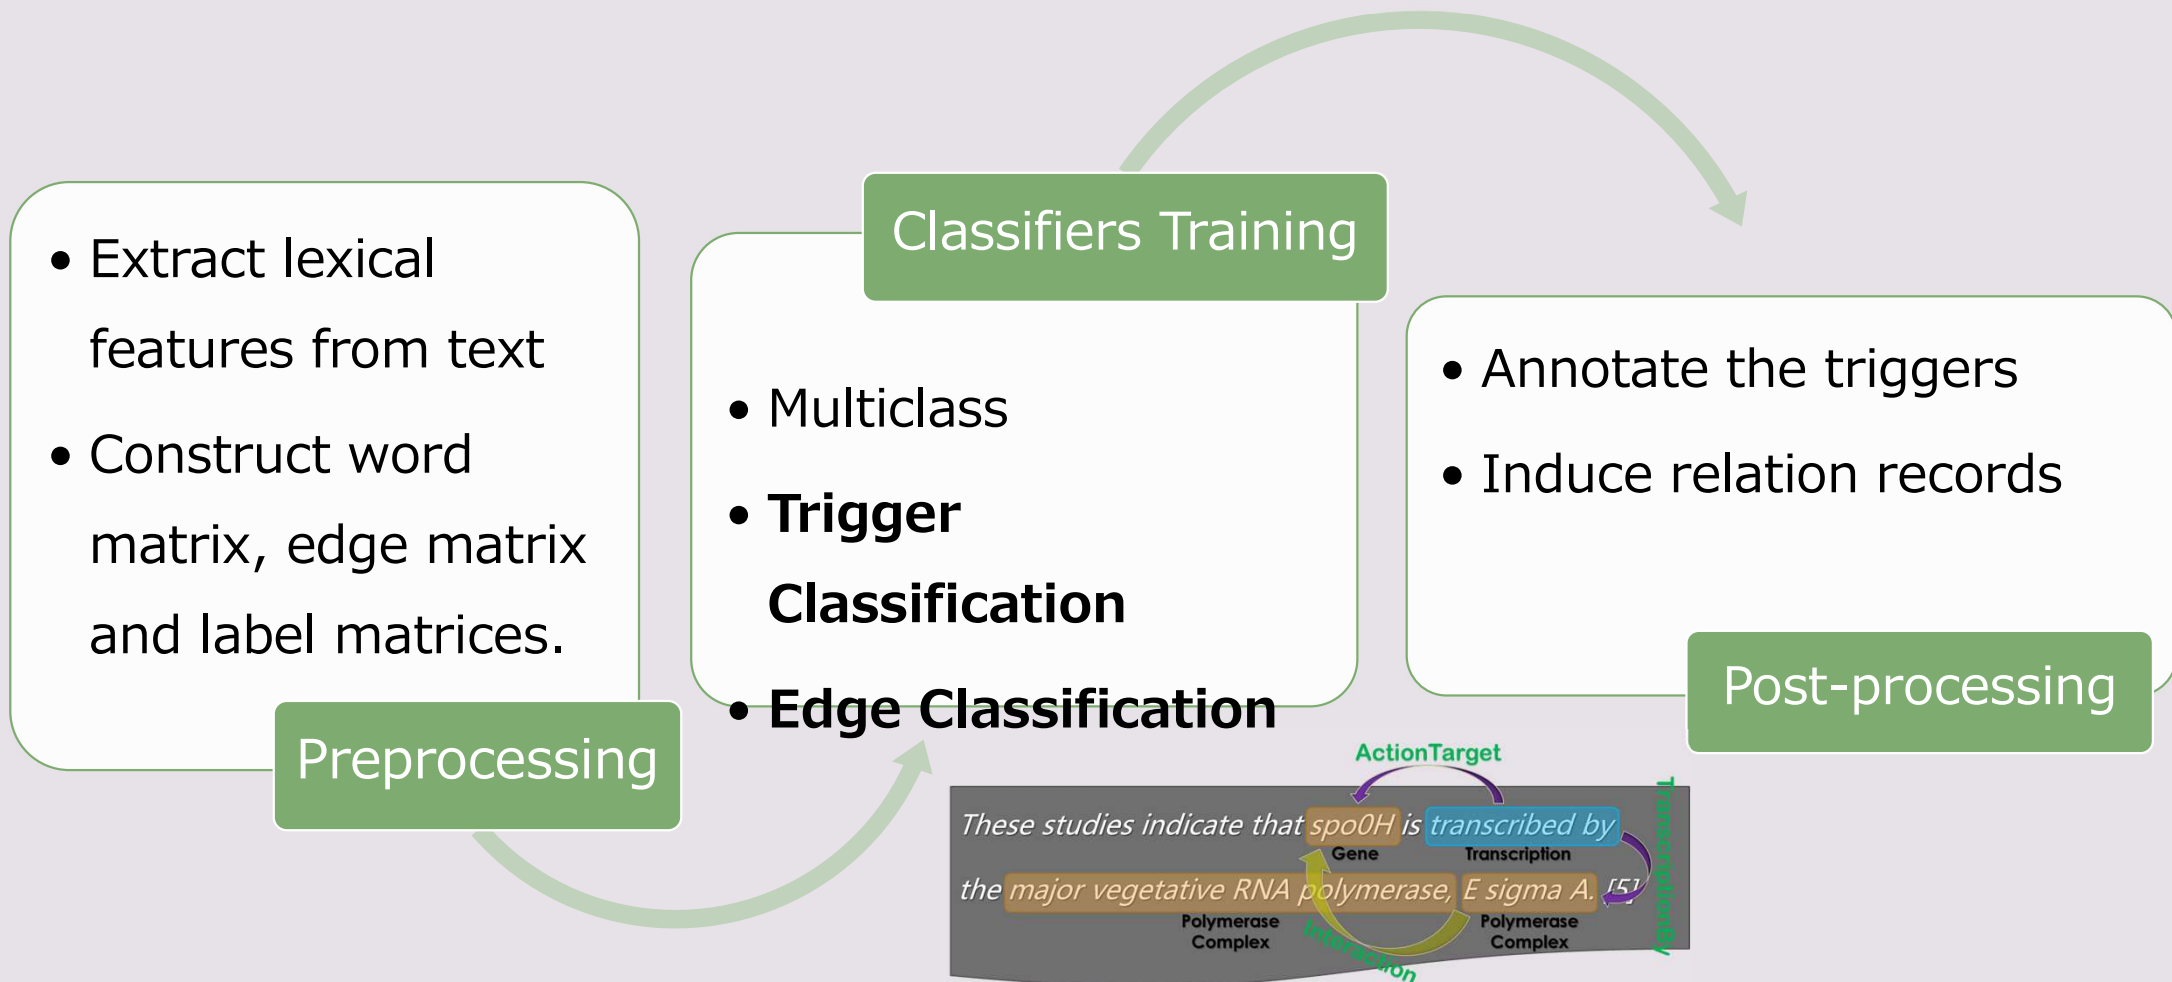

Bacteria Gene Interaction Extraction[4]

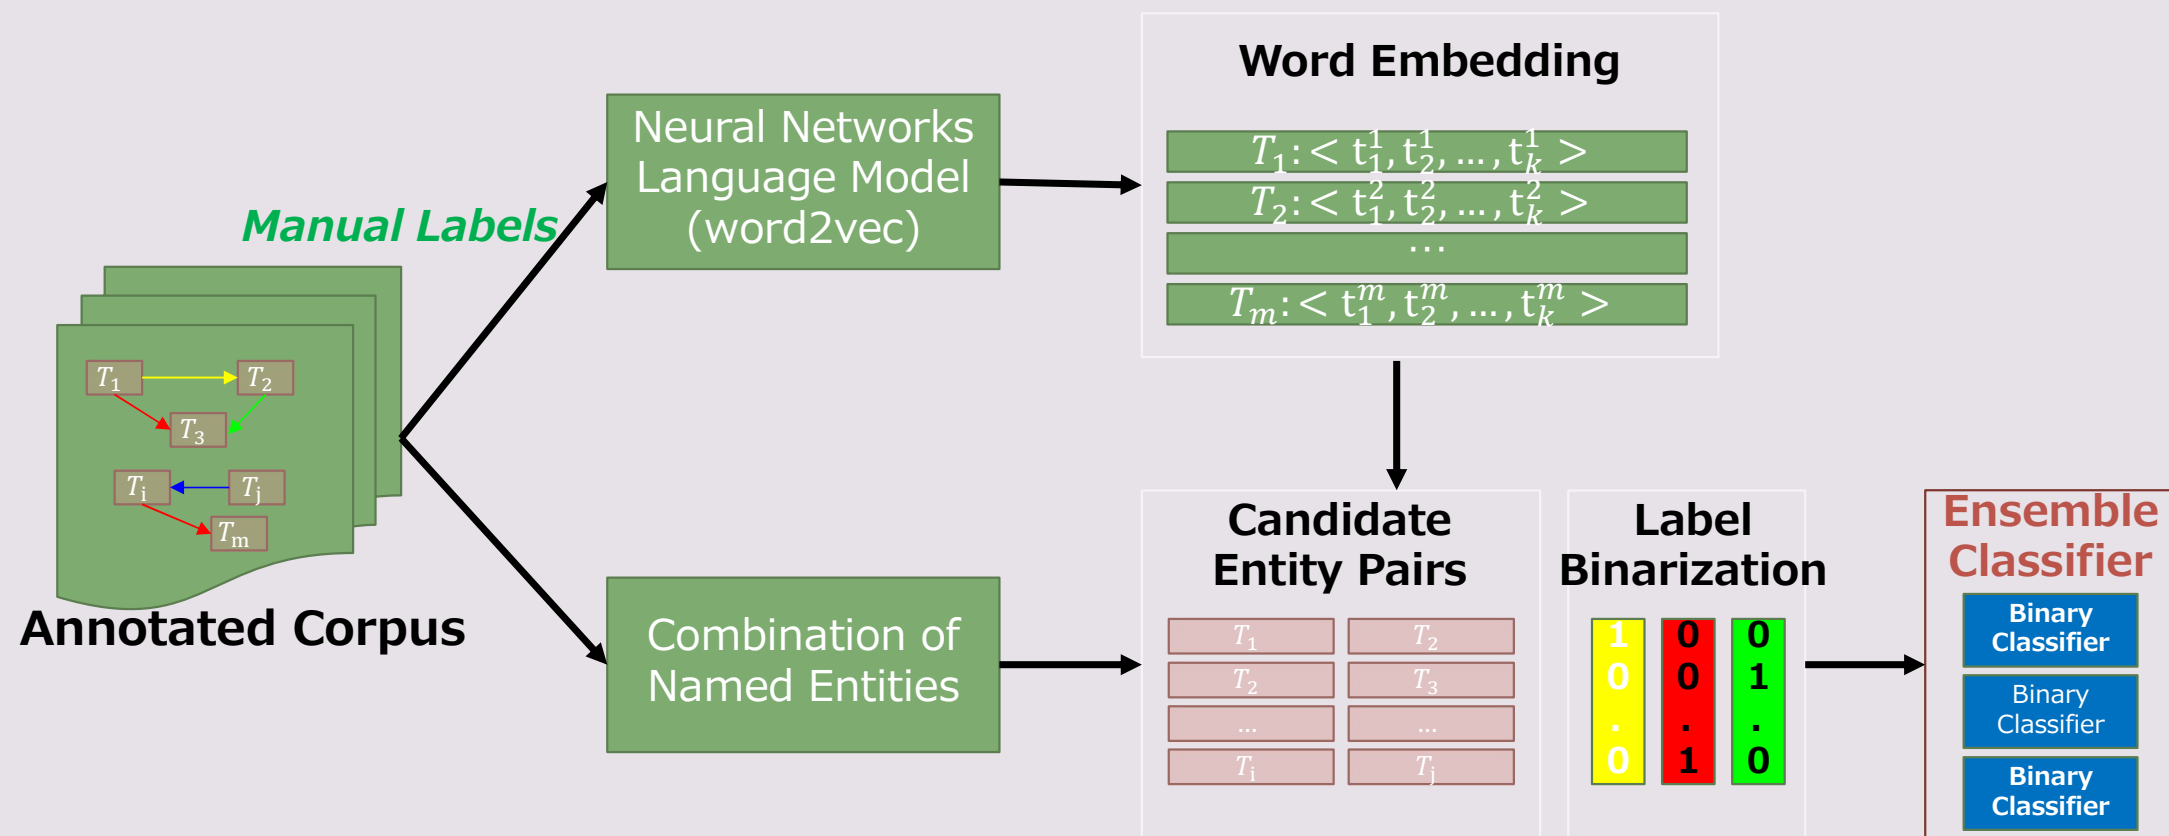

[4] Yan, Shankai, and Ka-Chun Wong. "Context awareness and embedding for biomedical event extraction." *Bioinformatics* 36.2 (2020): 637-643.

[5] Weir, J; Predich, M; Dubnau, E; Nair, G; Smith, I. (1991). Regulation of *spo0H*, a gene coding for the *Bacillus subtilis* sigma H factor. *J. Bacteriol.* vol. 173 (2) p. 521-529

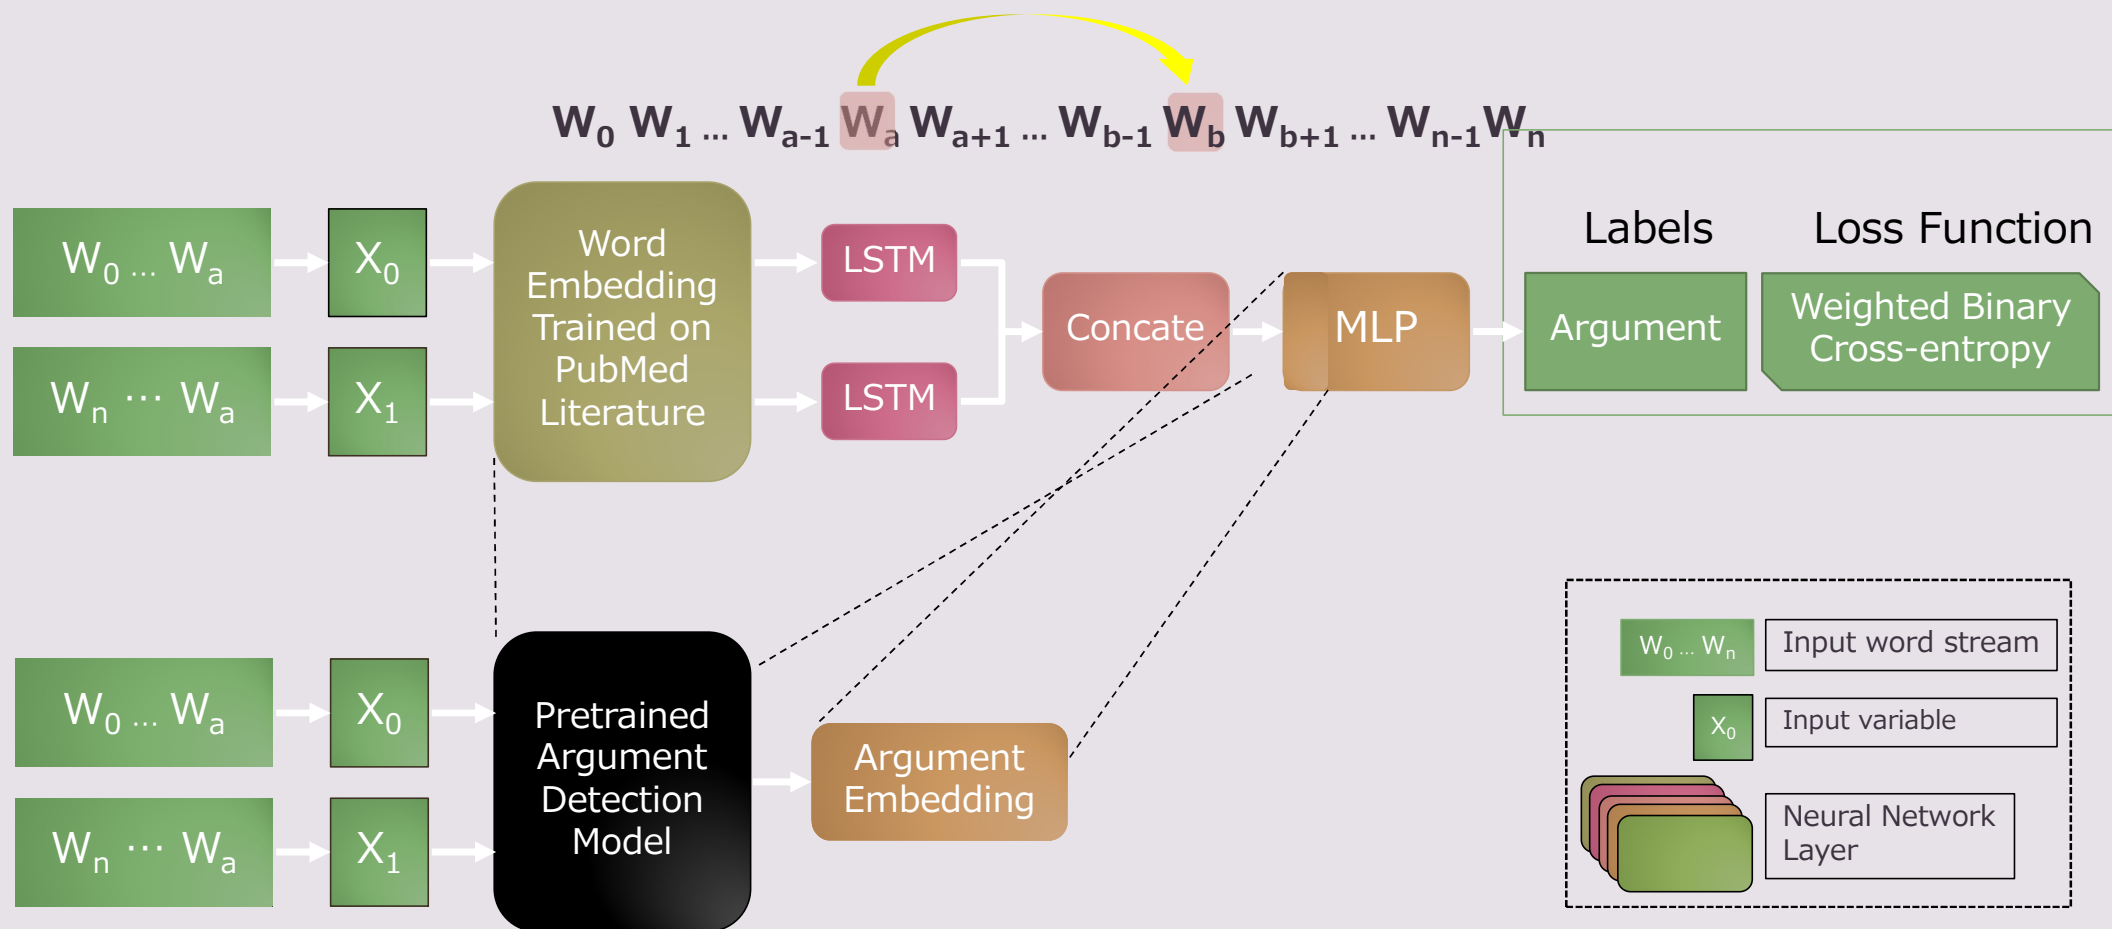

TRIGGER-BASED APPROACH

Non-Trigger Approach

Deep Learning Approach [4]

[4] **Yan, Shankai**, and Ka-Chun Wong. "Context awareness and embedding for biomedical event extraction." *Bioinformatics* 36.2 (2020): 637-643.

Difference from Conventional NLP Tasks

- ❑ Contains Biomedical Symbols, Punctuations, Terms
- ❑ The writers are from the biomedical/clinical expertise group
- ❑ Different Corpus/Context

Leaderboard

→ GLUE[6]

→ BLUE[7]

Methods

Feature Extraction:

Tokenization, Bag-of-Words, Normalization

Tokenization, Word Embeddings, Language Model

Classification/Regression/ Model:

SVM/RandomForest

Language Model/Encoder:

LSTM/CNN/BERT

Traditional Machine Learning Methods

Handcrafted Features

Tokens

Part-of-speech

Entity type

Grammatical function tag

Distance in the parse tree

Classifical ML models

Support Vector Machine (SVM)

Bayesian Classifier

Multi-layer Perception (MLP)

Ensemble Classifiers (Random Forest, Extra Trees, etc.)

SOTA Deep Learning Methods

Word Embedding / Language Model (Pre-trained)

Sequence to Vector

Encoder:

- *Bag of Embedding*
- *RNN/LSTM/GRU*
- *CNN*

Classifier:

- *Linear*
- *MLP*

Packages

NLTK: simple text processing

SpaCy: Pipeline

Stanza: Pipeline

Gensim: Word/Doc Embedding

Hugging Face (Transformers): SOTA Model

Text Mining on Knowledge Databases

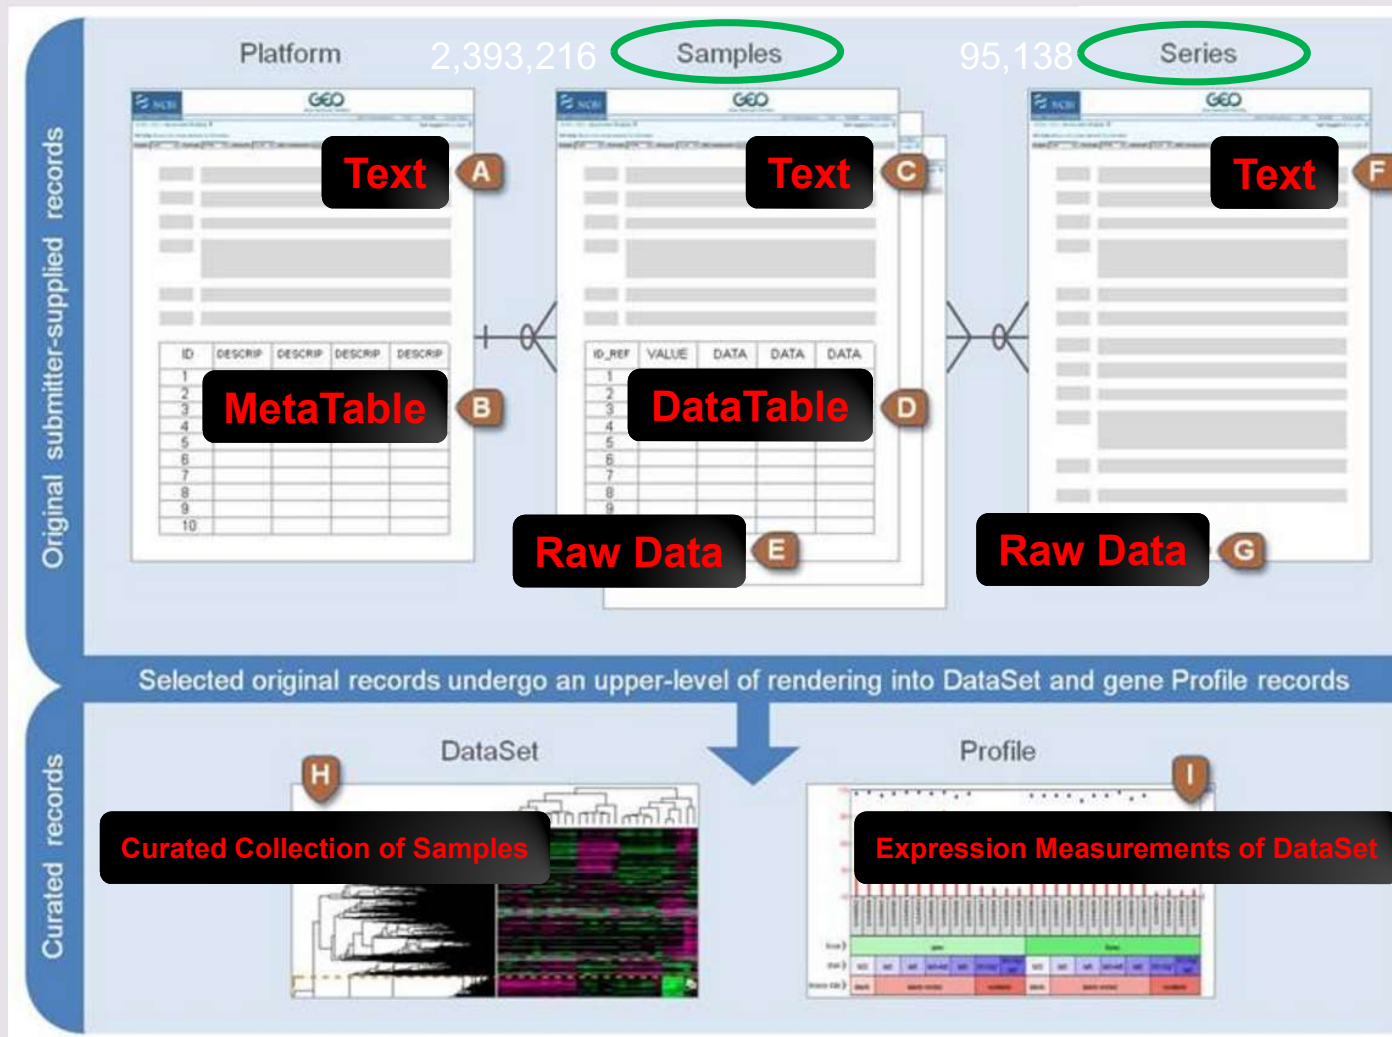

Experiment Repositories:

GEO/DECIPHER

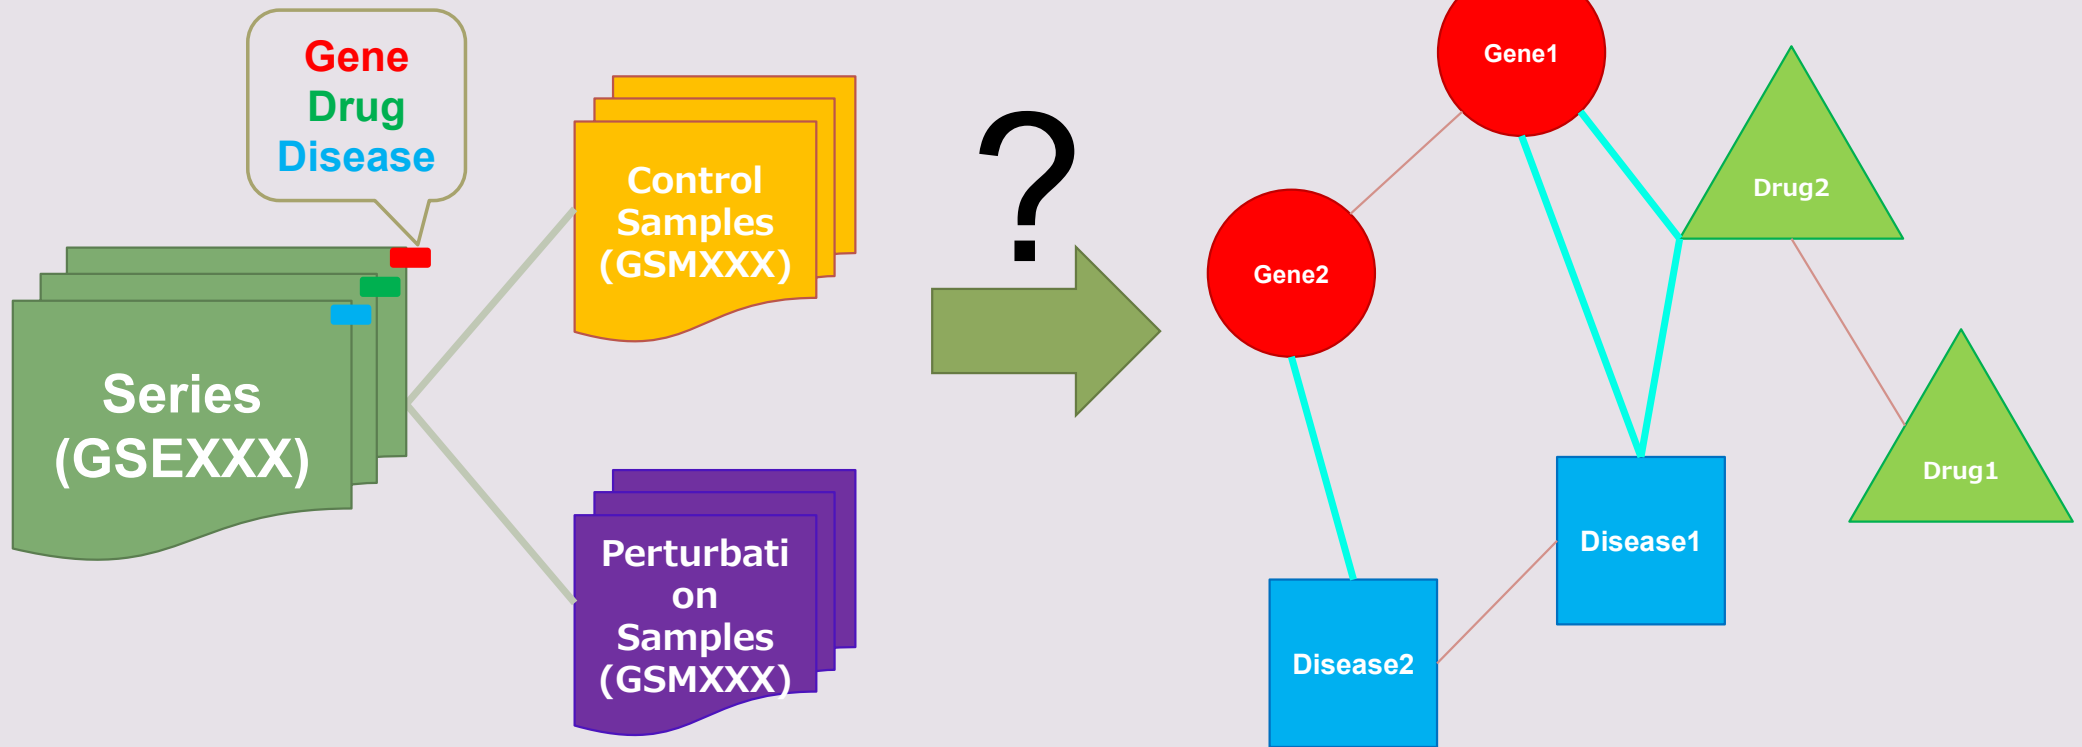

Ontology:

GO/HPO
